

OMNI'S DIGITAL ENGINEERING CAPABILITY

Omni is an Australian-owned business focused on delivering innovative defence, national security, intelligence and critical infrastructure solutions to further our national interest.

Our locally based, expert teams deliver cutting-edge technology and pioneering solutions in support of Australia's sovereign capability.

Omni supports its clients to accelerate and de-risk projects, by providing Digital Engineering services using the leading-edge Model-Based Systems Engineering (MBSE) tool Komposition.

Omni delivers digital engineering as an integrated digital approach, addressing project complexity in a collaborative, multi-disciplinary environment to explore shortfalls and options early, at a lower cost, and at reduced risk compared to traditional approaches.

As a game-changing enabler, the Komposition MBSE tool used by Omni's experts will realise the intent of the Defence Digital Engineering Strategy.

OUR OFFERING

Omni is proud of its partnership with Komposition, a fellow Australian-owned company focused on delivering value-for-money uplift for Australia's Defence, Critical Infrastructure and National Security.

Omni's qualified and experienced specialists use the Komposition tool to enable the delivery of complex projects and improved management of existing capabilities which involve multiple stakeholders and numerous interactions.

The innovative Komposition MBSE tool allows information to be drawn to support:

- Evidence-based decision making
- Risk reduction
- Improved traceability including enhanced understanding of the impacts on a system when circumstances involving the system change
- Verification and validation
- Better quality in-service management
- Reduction in costs
